

Experiment 1: Create a Simple Cloud Software Application and Provide it as SaaS

Aim

To create a simple cloud-based software application and deploy it using a Cloud Service Provider to demonstrate Software as a Service (SaaS).

Procedure

Login to the cloud platform (Zoho Creator/Azure/AWS).

Create a new cloud application project.

Design the required data entry forms.

Add fields such as Name, Email, Mobile Number, and Address.

Configure workflows and reports.

Deploy the application to the cloud.

Access the application through a web browser.

Test the application by entering and retrieving records.

Verify that users can access the application online without local installation.

Result

A simple cloud software application was successfully created, deployed, and accessed through the cloud, demonstrating the SaaS model.
